Skýringar *Notes*: Tölur hafa verið endurskoðaðar á grundvelli talna sem fengust við könnun árið 2004 vegna landsáætlunar um meðhöndlun úrgangs. Magntölur reyndust ívið hærri en áður hafði verið áætlað, t.d. vegna betri skráningar og skilgreiningar úrgangsflokka. *The now presented figures are higher than previously estimated, based on research carried out in 2004 in connection with the 1st Icelandic National Waste Management Plan. Better definitions of waste streams and increasing registration account for most of the increase of the figures, which were revised back to 1995.*
